Dr. Wagner:

I am pleased to submit the preliminary results (deliverable #3) of the CAN project for your review. Because this is a preliminary report and the results are not final, the completed and refined summaries of all the raw data will not be submitted until the final report (deliverable #4).

There is still one last follow up round of emails that will signal the end of the survey. However, given the sharp decrease in responses from email set one to email set two, I do not feel that results of the survey will significantly change with email set three. Changes, however, will be discussed in the final results of deliverable #4.

Additionally, the secondary target survey (which has been added to the scope of the original CAN project), will be complete during step 4.

The next step of the CAN project is to determine the nature, size and scope of medical and dental curriculum development efforts. Additional information such as lists of curriculum development resources dissemination routes (a marketing plan) will also be discussed.

I sincerely apologize for the delay in this project, according to the timeline established at its outset. A number of one-time set-up projects were needed to create the proper web survey collection system. Additionally, so extra time has been needed to complete the improvements to the original scope of the CAN project (the student survey and the secondary target survey). These factors should not affect any future similar projects, nor should they affect the timeline of the remainder of the project.

Sincerely,

**Matt Holder, MD, MBA**
